

When life's autumn comes, women, worn out by the burden and obligations of motherhood, yet shrink from the second change of life which will banish these burdens forever. They fear a change in form, in feature, in personal attractiveness, and that the loss of life will alone remain at the bottom of the cup of existence. Such fears are largely warranted by the effects which this change produces in many women. But no woman need let these fears fret her, who from the time of the first change of life, from girlhood to womanhood, has taken care to constantly keep her system in vigorous health.

Those who have used Dr. Pierce's Favorite Prescription do not suffer from the change of life either in face, form or feelings as do other women. This fact is due to the intimate connection of the general health with the health of the organs peculiarly feminine. By preserving the health of these organs, and relieving the system from the debilitating drains, ulcers and inflammations which sap its health, "Favorite Prescription" paves the way for this natural change to come in Nature's way, without the loss of capacity to please others or the personal inability to enjoy life.

Mrs. M. Barnes of Hulls Ferry, Okla., writes: "My physician said I was suffering from the effects of change of life, heart trouble and womb trouble and rheumatism. My head was so dizzy I could hardly stand up. When I began Dr. Pierce's medicine I improved right along. I took seven or eight bottles of the Favorite Prescription. It has done for me three times a day and the pleasant Pills at night. I feel as well as I ever did."

There is no alcohol, whiskey or other intoxicant in "Favorite Prescription." Neither does it contain opium or other narcotics. You may be willing that somebody else shall say that their baby is "just as good" as yours, but you don't want that baby substituted for yours. Let dealers say what they like about other medicines being "just as good," but don't let them substitute anything for "Favorite Prescription."

Dr. Pierce's Pleasant Pills cleanse the clogged system of impurities.

A recent dispatch from Austin to the St. Louis Republic says: Some citizens from Paris, Texas, are here to day consulting with the attorney general relative to taking legal steps to suppress the oil trust now forming in North Texas with New York capital behind it. This trust was recently organized in New York with several millions capital stock to control oil fields in Texas and they have begun their active operation along the line of laying up all the oil wells of the State. The Paris people are being surrounded now by the fetters of the trust and they want to shake loose before it is too late, hence their appeal to the attorney general to take immediate action.

A visitor to M. Flammarion's famous observatory at Juvigny found the eminent astronomer deeply engaged in experimenting with the action of the rays of the solar spectrum on flowers. He has discovered, says the London Leader, that plants have a maximum force of growth, when under the influence of the red ray. In the latter they appear to sleep, but do not perish. By the manipulation of different colored rays, M. Flammarion has succeeded in changing the form and color of the flowers and leaves. He has actually obtained upon one branch of a lilac blooms of different hues ranging from white to red, and passing through the various shades of pink, violet and purple. By means of another series of experiments, M. Flammarion has shown the effect of the different rays of the solar spectrum on the development of insects and the lower animals. Silkworms give more silk in the orange ray than in blue. Canary birds have a richer plumage and sing better in the red ray. The astronomer has had special glass houses built, fitted with different colored panes for these curious experiments.

The smokeless locomotive, which the Queen and Crescent road claims to have built, has excited interest among railroad men in Chicago. The locomotive was tested out of Cincinnati recently, and the results seem to have been satisfactory. The invention belongs to Receiver Felton. In the fire box of the locomotive are special hollow fire brick and deflecting air tubes in the side of the fire box that deflect the air admitted through them to a point above the fire, where it mingles with the gases thrown off by the coal. The gases thus become a part of the fuel by being consumed, leaving no smoke. In this connection the Chicago Tribune of Wednesday says: Commenting on the subject yesterday, J. F. Wallace, assistant second vice president of the Illinois Central said it was impossible for an engine to consume its own smoke, but that they were trying to reach a point where there would be such perfect combustion that smoke would not be generated. He thought the smokeless locomotive in question was the same old principle carried a point higher. "Some of our firemen feed their fires in a way that leaves scarcely any smoke," he continued, "but these men are not firing long, they become railroad presidents in time."

The following New York special was sent to the St. Louis Republic, and appears in Wednesday's issue of that Journal: "Nicholas W. Phillips, gunner's mate, first class, was found alone at his post at the forward turret of the Olympia putting the last touches on the starboard 8-inch gun. 'Come in,' he said, showing the way to climb down a narrow ladder. 'I will show you the gun that fired the first shot in Manila Bay engagement. It was my duty to superintend the loading of the turret's two guns.' Phillips delighted in showing in detail the operations of opening the breech, lifting the shell

from the ammunition hoist, placing it in position, loading the powder charge and closing the breech again. There hangs on this a story of the battle. 'It is necessary,' he said, 'to sponge the gun well after each firing. If this is neglected in the slightest degree, the shell does not go clear home and the breech mechanism cannot be closed completely. It might lock just this little bit of being closed, but—[I tell you what happened a shipmate of mine once in a Russian ship. He and seven others were in the turret at target practice. They neglected this point. They fired the gun with the breech not quite closed. It blew out the breech block. The flame followed and enveloped the whole interior of the turret. There wasn't enough of those seventeen men to say a prayer over. Besides which it disabled the gun. Now in the battle at Manila Bay, while I was watching the loading of the port gun, I could not watch the sponging of the starboard one. When the shell was rammed home and the powder placed in the starboard gun I closed the breech. It lacked only a little of being absolutely tight. I remembered my Russian friend's end. I could not fire the gun off as it was, but this is what I could do and did: I opened the breech and took out one or two bags of powder. Out of this I took a double handful, which I threw in the water bucket. I closed the bag and replaced it in the gun. The breech closed perfectly now. I called to the man up there to give the gun fifty yards more elevation. The shot struck true. After the battle the man asked me why I had given that order. I told him why—that if I had not done so we would have all perished.'"

A buried glacier has just been discovered on Boulder Creek, Alaska. The glacier was uncovered while putting in some trenching in Brockway and Chase's places. There was about eight inches of earth over the glacier on which trees eight inches in diameter were growing, showing the ice mountain, which is clear and pale blue, has been there for a long time. The ice is as solid as possible. Brockway and Chase decided to investigate the strange phenomenon and dug down twenty feet, but met the same solid clear ice. Around Boulder Creek in summer the ice disappears and the weather is hot. The glacier is to be utilized as a cold storage during the hot months.

Says the New York Sun of Wednesday: "So much greater than was anticipated has been the demand for rough lumber with which to put up stands for the parade that the market has almost given out and prices have gone up to an unprecedented height. A lumber dealer who does a big business said to a Sun reporter yesterday: 'We were ready for the rush that the big public stands would cause, but we didn't reckon on the great number of small stands, and here are going to be lots of disappointed people, who expected to build their structures and aren't going to get material. The ordinary price for such lumber as is used for the purpose is about \$18 per thousand. Yesterday it was \$48 a thousand and to-day \$50 a thousand has been offered. The lumber to be returned after the parade. Some builders are using high-grade lumber because they can't get pine and hemlock. As fast as the stuff comes in on train or boat we are getting it out, and we're even sending our customers direct to the freight yards and the wharves so that they can get it as soon as it arrives. It's the greatest temporary boom the lumber trade has ever known in this city.'"

**IT MADE HIM THINK**  
Galveston Tribune.  
It is no use chucking stones at Galveston because we think that some things we have here are just a peg better than can be had elsewhere. This time we have a very high authority to commend the particular handling of one particular branch of a very important industry, the purity of which the Tribune made a hard year's fight for.

Yesterday Mr. James K. Pearson of No. 7 West Kensington Terrace, West Kensington, England, left Galveston for Chicago. Mr. Pearson is a milkman; to be more explicit, Mr. Pearson does the largest dairy business in England, sending 3000 gallons daily to London. Incidentally he furnishes the milk used by the royal family. Of course when Mr. Pearson arrived here

**WINE OF CARDUI**  
**Woman Knows Woman.**

Used Wine of Cardui for nervousness and weakness in the month. After taking one bottle I was well again. I am a mother and always recommended Wine of Cardui to my two friends during pregnancy and after birth as a tonic. Every lady who takes it knows that it does even more than is claimed for it.

MRS. V. M. BOIVERT.

**WINE OF CARDUI**

Nobody knows woman like woman. Men go to medical colleges, study books and listen to lectures. They learn indirectly of the diseases of women, but they are not and can never fully understand the ailments, the suffering, the anxieties of mothers, wives and sisters. A woman knows. Mrs. Boivert knows. She has passed through the trials and tribulations of her sex. She has been near by when her sisters suffered. She has seen them relieved and cured with Wine of Cardui. Is it any wonder she recommends it? Is it any wonder that thousands of other women recommend it? They know. They have actual experience to prompt them. They spread the tidings from mouth to mouth, telling how Wine of Cardui helps young girls, helps the weak of all ages, helps and cures all womanly ills.

**LADIES' ADVISORY DEPARTMENT.**  
For advice in cases of nervousness, indigestion, headache, dizziness, etc., write to the Ladies' Advisory Department, Wine of Cardui, 124 S. LaSalle St., Chicago, Ill.

Druggists Sell Large Bottles for \$1.00.

**WINE OF CARDUI**

a few days ago on one of the numerous cargo boats crossing the western ocean for Galveston, he at once fell into good hands who steered him up against the British club, where he blew into the neck of the Belfast ginger ale bottle until all the liquid herein had been displaced. Then he fell into talking shop. He was in the hands of the Paul Wheeler dairy at Hampshire. Talking shop means talking of milk.

Mr. Pearson told how he handled his product. Some of it he takes from his own herd, while the rest of it is furnished him from herds known to be rich milkers. The milk is cooled to ground water temperature and delivered in London to customers in tin cans. Then it was that Mr. Pearson was asked to look into the way the milk is handled at the Paul Wheeler dairy, and he learned something—he says so himself—about handling milk.

First, Mr. Pearson learned that the Wheeler herd is selected stock, sound, healthy and rich milkers. Then he learned that within five minutes after the milk is taken from the cow its temperature has been reduced from 98 to 60 degrees, and that the product goes to the refrigerating room and within one hour the temperature is further reduced to 35 degrees Fahrenheit. Then the milk is shipped to Galveston in bucketed cans and taken to the cold storage rooms at 112 20th street, where it is kept at a temperature of 35 until it is bottled for delivery to consumers. The delivery is made in pint and quart bottles, sealed with a specially prepared air tight paper stopper.

All this was something Mr. Pearson had not run up against in all his experience as a dairyman, and he said so. Further, he said that he should adopt several of the Wheeler methods as soon as he returns to West Kensington, and he also will write of what he has seen in the Texas dairy for publication.

Of the relative prices of milk in London and Galveston, Mr. Pearson gets a cents a quart, while the Galveston price is 10 cents a quart.

Now, reference to chucking stones at Galveston because we think we have some things just a peg better than elsewhere, refers to the product of the Paul Wheeler dairy. The Tribune tussled and preached and struggled for a city milk inspection—which we have not. But we have good milk and anyone can get it who wants it. Good milk is just as cheap as impure milk, the only difference being that impure milk fattens pigs better than human beings, and that good milk makes our babies strong and healthy. God bless them.

It may be a bit of news to most Galvestonians that in no place in these United States is milk handled from the cow to the consumer so carefully and cleanly as at the Paul Wheeler dairy. It's a fact, and if the milk supplies of the large cities of this country were conducted with the same care and attention to details and sanitary laws as the Texas dairy, the death rate among the small children would be reduced very materially.

**ME AND THAT MULE.**  
You may cheer and hurrah for Mr. Schley.  
The hero of Santiago.  
But the mule I killed at Mantanza.  
Will with me in history glow.  
Mr. Schley may have stopped the Spanish fleet.  
When Cervera made a dash.  
But I tell you fellows, when I hit that mule  
I surely settled his hash.  
That mule with me in history  
Will live after Schley is dead.  
And Patriots as they come along,  
Will wonder as it's read,  
Me and that mule in history,  
Will be assigned our place—  
We'll be on opposite pages.  
And you'll see us face to face.  
Mr. Schley—he won't be in it.  
With that famous mule and me—  
We'll live as long as cannons roar.  
And our flag commands the sea. H.

**LADIES' BENEVOLENT SOCIETY.**  
The Ladies' Benevolent Society will meet at the residence of Mrs. S. Lederer, Wednesday, October 4, at 3 o'clock.

**ELECTRIKURE.**  
Kills all the microbes or germs of all nature, and extracts from the blood all foreign matter, thereby giving disease no location in the body.  
It reduces and cures all fever quicker than medicine can act, and cures many of these-called "incurables."  
It is a preventative of disease if used intelligently and cannot in any way do harm. For information as to its value, we have many local and foreign testimonials. C. T. Giles & Co., Crosby House.

**THROUGH SLEEPERS.**  
To the Public: Commencing October 1, the Port Arthur route will put on a through sleeper between Kansas City and Port Arthur, which will run daily on trains Nos. 1 and 2. J. C. MOW, Commercial Agent.

The following program will be rendered by the Woman's Reading Club Saturday afternoon, Oct. 7, when the club will be entertained by Miss Val- le Fletcher on Calder avenue.  
No! Freedom has a thousand claims to show,  
That slaves, however contented, never know.
